(54) Title: SPORTS SHOE COVER

(57) **Abstract:** A cover for a lace-up football boot has a continuous, elastically expandable sleeve (1). The sleeve is, in use, stretched around the boot so that the latter extends through the sleeve with the toe of the boot protruding from the end of the sleeve, and that the underside of the sleeve engages the portion of the underside of the boot in a region between the heel and the toe (i.e. under the arch of the foot). This engagement between the sleeve and the boot is sufficient to hold the sleeve in position on the boot in use, the sleeve also covering the bootlaces to prevent the latter from untying. At least part of the cover may also be transparent so as to reveal ornamental features or indicia on the boot.
